SYNTHETIC DEMONSTRATION

Quarterly executive report

01 Jul 2026 - 31 Aug 2026 | Country: All | Sales channel: All | USD

All figures come from fictional, reproducible data. These findings demonstrate the platform and are not recommendations about a real business.

Measure	Current period	Previous equal-length period
Net sales	$1,044,476	$1,015,513
Purchasing customers	1,375	1,402
Orders	5,565	5,362
Average order value	$188	$189
Gross margin	40.3%	40.6%
Repeat purchase rate	69.7%	65.1%

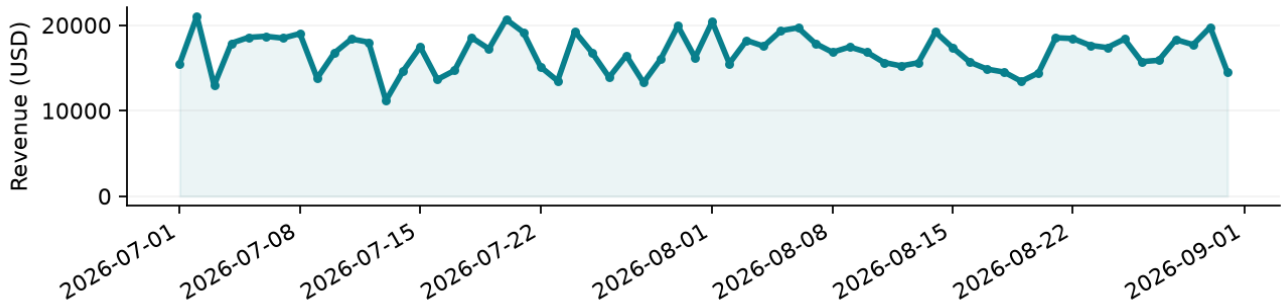

Comparison: 2026-04-30 to 2026-06-30.

Operating readout

DE contributes $153,546, or 14.7% of sales in this scope. Review assortment and branch capacity before attributing this concentration to campaign effectiveness.

Period retention is 81.0%: 1,136 of 1,402 prior-period buyers purchased again. This measures observed return purchasing, not contractual churn.

Revenue during the reporting period

Customer priorities & measurement

Snapshot through the report end date. Customer values use all observed purchase history in the selected country and sales channel.

Segment	Customers	Historical sales
Champions	651	$4,436,784
Loyal	876	$1,568,866
At risk	264	$429,613
Developing	9	$3,312

Suggested investigations

Review the 264 buyers inactive for more than 90 days. A win-back experiment should use a randomized holdout, consented audiences and incremental gross profit as its outcome. The threshold alone does not prove churn.

Electronics is the largest category by revenue ($303,539). Check its gross profit ($113,283) alongside stock availability before changing the assortment.

Metric definitions

Net sales: sum of completed, reconciled order amounts after discounts. Fully refunded and cancelled orders are excluded. The source contract does not support partial refunds or taxes. Gross margin: (sales minus product cost) / sales. Average order value: sales / completed orders. Repeat rate: buyers with two or more period orders / period buyers.

At risk: last observed purchase more than 90 days before the report end. Champions: active buyers with 10+ orders and $3,000+ observed sales. Loyal: active buyers with 3+ orders. Annual value proxy: historical gross profit / max(observed exposure days, 90) x 365. This proxy is not a calibrated lifetime estimate.

Source lineage & limitations

Run de1471aaca31. Built 2026-09-29T06:37:02.514575+00:00. Source coverage: 2024-01-01 to 2026-08-31. Canonical source extracts, cleaning rules and warehouse SQL are reproducible with the supplied project. SHA-256 source fingerprints are stored in the data_quality table.

Dates use UTC and amounts are already normalized to USD. Monthly and quarterly reports are period-to-date when the end date precedes period end. A period comparison uses equal calendar-day counts, not matched weekdays. Source coverage must be complete before missing dates can be interpreted as zero. Enterprise volume and production identity integration require separate deployment testing.
